1 Abstract

2 This is the text of the abstract. Abstracts should always be written after you've finished everything
3 else.

4 Introduction

5 For time immemorial, humankind has wondered: If I have two apples, and someone gives me another
6 two apples, how many apples do I have? Some people did this (Darwin, 1859). Other people did
7 that (Wallace, 1869).

8 The major problems with those approaches are that they forgot Poland. We seek to remedy this
9 by applying a Bayesian Approach.

10 **Methods**

11 We constructed the following mathematical model (equation 1) to better understand the concept:

$$Y = 2a + 2a \tag{1}$$

12 Where a represents an apple.

13 **Results**

14 We found that if you have two apples, and someone gives you another two apples, you have four
15 apples.

16 **Discussion**

17 Boy those results sure are neat. Now, the pressing question becomes: How do you like them apples?
18 Further research is needed.

19 **Acknowledgements**

20 We wish to thank all of the little people.

21 **Funding**

22 This study was funded by grant number 8-6753-09 from The Super-Rich Uncle Foundation to First
23 Author.

24 **Author Contributions**

25 Conceived and designed the experiments: Collected the data: Conducted the analyses: Wrote the
26 first draft: Edited the manuscript:

27 **Ethics Statement**

28 The authors declare big, honkin' conflicts of interest.

29 **Data Availability**

30 The data and code used to generate our results can be found at the following url:
